ART BRICKS

Catalogue

73 clay and natural stone bricks, selected for Australian projects.

Every product, by code

This catalogue lists every Art Bricks product: 24 clay and 49 natural stone. Each has a code, and the code is its name everywhere: here, on the price list, on quotes and invoices, and on the website.

Sizes are nominal averages in millimetres, length × width × height. Clay and natural stone vary between units and between batches; allow for it in setting out.

Pieces per m² assume a 10 mm joint. A dash means a figure is not yet confirmed; it is added in the next edition.

Durability is stated only once a laboratory report exists. Until then the page says testing in progress. Images are indicative.

Bond patterns

Drawn with a 380 × 50 face and a 10 mm joint. Long formats change how a bond reads: the longer the unit, the more the horizontal lines lead.

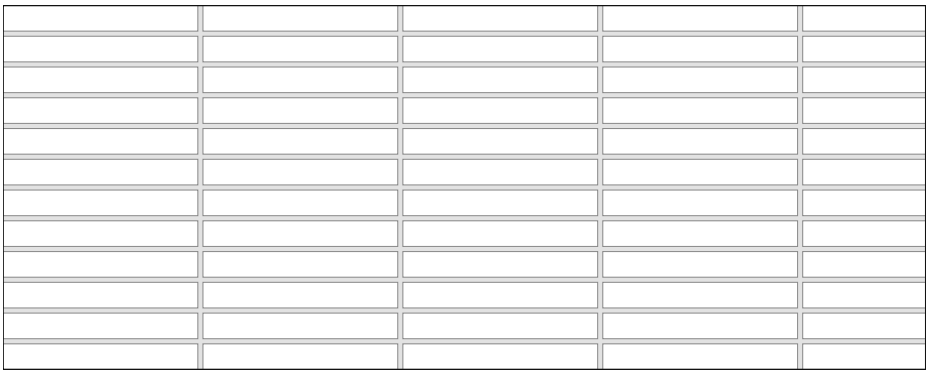

Stretcher bond

Each course is offset by half a unit. The common bond for walls and veneers.

Third bond

Each course is offset by a third of a unit. Suits long formats: the vertical joints step across the wall instead of lining up every second course.

Stack bond

Units sit directly above one another, so the vertical joints run unbroken. Confirm joint reinforcement with your engineer.
